

AI generated -- for internal use only.

Quarters covered: 2025_Q4, 2026_Q1, 2026_Q2

Framing

- The framing of AI has evolved from a dual focus on product (Erica) and efficiency in 2025_Q4 to primarily an efficiency and cost-saving tool in 2026_Q1, before expanding again in 2026_Q2 to also include indirect revenue generation through financing the broader AI infrastructure build. [1][2][3][4]
- Throughout the period, management consistently framed AI as a net opportunity for the business, focusing on productivity and efficiency benefits. [5][6][7]
- Management proactively brought up AI in prepared remarks in all three quarters. [8][9][10]
- While management's tone was consistently optimistic about AI, a note of caution regarding data security and careful management became more explicit by 2026_Q1 and 2026_Q2. [11][12][13]

Execution & Investment

- The company's disclosure of AI investment shifted from a specific figure of 'several hundred million dollars' in 2025_Q4 to no specific figure in 2026_Q1 and 2026_Q2, where it was mentioned only as part of general technology spend. [14]
- While consistently attributing cost savings and productivity gains to AI, the quantification of these returns became less specific over time. A claim of saving 'about 2,000 people' in coding in 2025_Q4 was followed by more qualitative statements about 'real benefits' in 2026_Q1 and 'good economics' in 2026_Q2. [15][16][17]
- Reporting on internal AI use cases matured significantly. The discussion evolved from '15, 20 projects' in 2025_Q4, to '90 installations' in 2026_Q1, and then to a detailed accounting of '300 AI use cases approved' with '114 live' in 2026_Q2. [18][19][20]
- The company consistently reported a hybrid approach to AI development, leveraging external partner products like Microsoft's 365 CoPilot in 2025_Q4 while also developing internal capabilities and emphasizing data protection, a point reiterated in 2026_Q1. [21][22][23]
- While direct headcount reduction was attributed to AI in 2025_Q4, this link became less direct in later quarters. In 2026_Q1 AI was said to enable headcount management through attrition, and by 2026_Q2, no direct link between headcount changes and AI was made. [24][25][26]
- No new roles, teams, or organizational structures for AI were mentioned in any of the three quarters, though 'catalyst efforts' were noted in 2026_Q1. [27]

Competitive Landscape

- The company's positioning on AI relative to peers evolved from no direct comparison in 2025_Q4 to implying a superior approach to data protection in 2026_Q1, and finally to more direct claims of being 'ahead of peers' and 'leading' in certain areas by 2026_Q2. [28][29][30]
- Across all three quarters, management did not name any non-traditional competitors as AI-enabled threats. [31]

Outlook & Credibility

- The company's forward-looking statements on AI became less specific over time. Pledges in 2025_Q4 about getting more out of coding tools and the audit team's plans were followed by more general trends in 2026_Q1 and a lack of a detailed roadmap in 2026_Q2, noting simply that 'new capabilities [are] coming on every week'. [32][33][34][35]
- Management's commentary on the broader AI market appeared for the first time in 2026_Q2, where they identified the AI-driven infrastructure build as a durable economic force and a business opportunity, after not commenting on it in the prior two quarters. [36][37]
- The specificity of AI-related claims peaked in 2026_Q2. After a mix of specific and vague claims in 2025_Q4 and mostly vague claims in 2026_Q1, the company provided hard metrics in 2026_Q2 such as 300 approved use cases, 114 live GenAI cases, and 400,000 daily prompts. [38][39][40][41]

Evidence

#	quarter	page	speaker	excerpt
[1]	2025_Q4	3	Brian Moynihan Chair and CEO, Bank of America	You should note there the impact of Zelle and the continued usage growth and also note the impact of Erica, our AI agent, and its use both across our businesses and with our teammates.
[2]	2025_Q4	4	Alastair Borthwick Executive Vice President and CFO, Bank of America	We saw productivity improvements through AI and digitalization more generally, and those enabled us to add client-facing associates as we eliminated work and roles in our operational support areas.
[3]	2026_Q1	3	Brian Moynihan Chair and CEO, Bank of America	The application of artificial intelligence, and the detailed process reengineering all help reduce manual work, lower unit costs, and limit increase in our base cost structure. That's why, even as we've invested, we continue to deliver positive operating leverage.

[4]	2026_Q2	8	Alastair Borthwick	AI plays a role, I think, in two ways. The first one is on the revenue side. There's obviously a big AI theme going on in the world. We're leading in investment banking and global markets around capital raising financing, that massive capital investment and infrastructure build around the world. So that's helping us there. And then you're asking a question that's really about sustainability going forward. Can it help us with our own operations? The answer is yes.
[5]	2025_Q4	6	Alastair Borthwick Executive Vice President and CFO, Bank of America	Beyond that, productivity improvements from AI and digitalization continued to help offset higher wages, benefits, and technology investments.
[6]	2026_Q1	12	Brian Moynihan Chair and CEO, Bank of America	Mike, I think in your question, you gave the answer, which is we are a beneficiary of the impacts of all technology, including AI. We've applied it and we'll continue to apply our team's job, and we've got catalyst efforts going on, on a corporate wide basis to bring all the ideas to bear.
[7]	2026_Q2	3	Brian Moynihan	And all our teammates improve productivity, consistency and client service while creating significant opportunities ahead of us.
[8]	2025_Q4	3	Brian Moynihan Chair and CEO, Bank of America	In addition to these stats, I commend you to review Slides 21, 23, and 25. Those highlight the continued progress of digital deployment and activation statistics for each of our businesses. You should note there the impact of Zelle and the continued usage growth and also note the impact of Erica, our AI agent, and its use both across our businesses and with our teammates.
[9]	2026_Q1	3	Brian Moynihan Chair and CEO, Bank of America	The second thing we do is we continue to offset those investments through productivity and simplification. The continued digitization of activities by our clients and inside our company, the application of artificial intelligence, and the detailed process reengineering all help reduce manual work, lower unit costs, and limit increase in our base cost structure.
[10]	2026_Q2	3	Brian Moynihan	Third, we manage cost while we continue to invest in the franchise, our brand, our people, our technology, and our AI-enabled productivity. Asset quality also remained stable and consistent with the strong underwriting discipline that has characterized our company for many years.
[11]	2025_Q4	11	Brian Moynihan Chair and CEO, Bank of America	Next year, we should get more out of it as we figure out and apply it across. So there's different projects going on in the company.
[12]	2026_Q1	13	Brian Moynihan Chair and CEO, Bank of America	Frankly, the - some of the gates on our adoption of some of these technologies are, we're protecting customer data where other people are not. And that's been a constant struggle from cloud computing into the - so we keep our data out of the models, we keep - so that our customer data, et cetera, and take advantage of the models coming into us, but not feeding them. And that's what we owe our customers.
[13]	2026_Q2	14	Brian Moynihan	it's a very powerful tool. It has great utility. It has to be carefully managed. You have to have your data perfect. You have to have your rules based so it doesn't make mistakes in how you use it.
[14]	2025_Q4	11	Brian Moynihan Chair and CEO, Bank of America	I don't know off the top of my head the total expenditure, but it's several hundred million dollars.
[15]	2025_Q4	11	Brian Moynihan Chair and CEO, Bank of America	we have 18,000 people on the company's payroll who code. And we've using AI techniques, we've taken 30% out of the coding part of the stream of introducing a new product to service or change that saves us about 2,000 people. So that's how we're applying it. That was this year's statistic, meaning '25.
[16]	2026_Q1	10	Brian Moynihan Chair and CEO, Bank of America	we're still in the early stages of what all this will do, but we're seeing real benefits out of it today.
[17]	2026_Q2	3	Brian Moynihan	And as of last week, we had over 300 AI use cases approved - all of which have good economics - of which 114 are live generative AI use cases.
[18]	2025_Q4	11	Brian Moynihan Chair and CEO, Bank of America	So, there's, I don't know, 15, 20 projects going on, and there will be a laundry list of much bigger size as we go through the company now and are generating ideas now that people are using it and getting used to how to use it.

[19]	2026_Q1	10	Brian Moynihan Chair and CEO, Bank of America	AI gives us pieces to go, we haven't gone. And we've got 90 installations working. All 200,000 teammates have access to AI or can use it every day.
[20]	2026_Q2	3	Brian Moynihan	And as of last week, we had over 300 AI use cases approved - all of which have good economics - of which 114 are live generative AI use cases. 34 of those cases are fully implemented, and we see new capabilities coming on every week.
[21]	2025_Q4	11	Brian Moynihan Chair and CEO, Bank of America	Importantly, we're going through the company to generate more ideas on how to apply AI. And I use example like our audit team has built a capability they think a series of prompts around doing audits and stuff to allow them to shape the headcount back down...
[22]	2025_Q4	10	Brian Moynihan Chair and CEO, Bank of America	for example, under the 365 CoPilot rollout, which is now out across a total of 200,000 teammates using it and learning from it, we expect to get good leverage of that.
[23]	2026_Q1	13	Brian Moynihan Chair and CEO, Bank of America	so we keep our data out of the models, we keep - so that our customer data, et cetera, and take advantage of the models coming into us, but not feeding them. And that's what we owe our customers.
[24]	2025_Q4	11	Brian Moynihan Chair and CEO, Bank of America	we have 18,000 people on the company's payroll who code. And we've using AI techniques, we've taken 30% out of the coding part of the stream of introducing a new product to service or change that saves us about 2,000 people.
[25]	2026_Q1	10	Brian Moynihan Chair and CEO, Bank of America	but it comes from eliminating work and applying technology and consumer and commercial customers using those technologies and AI gives us pieces to go, we haven't gone.
[26]	2026_Q2	13	Alastair Borthwick	But I think if you look at the core, the best core measure is probably headcount. Our head count discipline over the last 6 quarters has been excellent. It's flat to slightly down. So, we expect good core expense discipline and the expense at this point is really going to be based on what happens with revenue.
[27]	2026_Q1	12	Brian Moynihan Chair and CEO, Bank of America	We've applied it and we'll continue to apply our team's job, and we've got catalyst efforts going on, on a corporate wide basis to bring all the ideas to bear.
[28]	2026_Q1	13	Brian Moynihan Chair and CEO, Bank of America	Frankly, the - some of the gates on our adoption of some of these technologies are, we're protecting customer data where other people are not.
[29]	2026_Q2	10	Ben Gerlinger	I guess that you're probably ahead of peers across every major category of AI and technology and is being a bit more digital.
[30]	2026_Q2	8	Alastair Borthwick	The first one is on the revenue side. There's obviously a big AI theme going on in the world. We're leading in investment banking and global markets around capital raising financing, that massive capital investment and infrastructure build around the world.
[31]	2026_Q1	12	Mike Mayo Analyst, Wells Fargo	since the last earnings report, there have been concerns about the long term, right. That AI agents will come and take your deposits. That AI bad actors will commit cybercrime against you. That AI spend will not bear fruit.
[32]	2025_Q4	11	Brian Moynihan Chair and CEO, Bank of America	Next year, we should get more out of it as we figure out and apply it across.
[33]	2025_Q4	11	Brian Moynihan Chair and CEO, Bank of America	So, there's, I don't know, 15, 20 projects going on, and there will be a laundry list of much bigger size as we go through the company now and are generating ideas now that people are using it and getting used to how to use it.
[34]	2026_Q1	13	Brian Moynihan Chair and CEO, Bank of America	So I'm not going to give you exactly because you know that's fraught with air because it never quite works out that way, but the trends will be more technology, more intimacy with the customers more agentic versus prompt more built into the process rather than have it be delivered by teammates doing something, it's part of the process.
[35]	2026_Q2	3	Brian Moynihan	34 of those cases are fully implemented, and we see new capabilities coming on every week. These tools are designed to help our customer relationship management prepare more thoroughly for the client meetings.
[36]	2026_Q2	3	Brian Moynihan	So overall, the U.S. economy has proved more durable than expected, supported by the strong consumer, ongoing AI-driven investments across the board, and easing energy costs, though inflation and tighter monetary policy remain key risk.

[37]	2026_Q2	14	Brian Moynihan	we feel it will be a powerful force in place where the American economy will be very successful.
[38]	2025_Q4	11	Brian Moynihan Chair and CEO, Bank of America	we have 18,000 people on the company's payroll who code. And we've using AI techniques, we've taken 30% out of the coding part of the stream of introducing a new product to service or change that saves us about 2,000 people.
[39]	2025_Q4	10	Brian Moynihan Chair and CEO, Bank of America	So, as we told you at Investor Day, today's activity in Erica in our consumer business alone is worth thousands of teammates that we don't have to have to do the great work we do for the customers.
[40]	2026_Q1	10	Brian Moynihan Chair and CEO, Bank of America	And we've got 90 installations working. All 200,000 teammates have access to AI or can use it every day... we're still in the early stages of what all this will do, but we're seeing real benefits out of it today.
[41]	2026_Q2	3	Brian Moynihan	Our associates are generating more than 400,000 prompts a day. And as of last week, we had over 300 AI use cases approved - all of which have good economics - of which 114 are live generative AI use cases.
